

AP JAVA Summer Assignment Instructions

The assignment was given to you before the end of the year in your Intro to Computer Science Class. It is in PDF Format.

The file is a scan of a portion of one of your books, and the quality is not great, sorry. Ignore the numbering – it resets about 2/3 of the way through.

These are sample AP questions that you already have the knowledge necessary (or can deduce the rest) to answer them. This will introduce you to the kinds of questions, format, difficulty level you will experience on the real test.

Since we obviously have not covered everything in the Intro course, you will have to skip the following questions:

10 (you can actually try this one), 13, 17, 19, 27, 32,
then numbering resets...skip 2, 7, 18, 27, 28

Use your topical index & notes where necessary. Do not try to answer the questions too quickly. Read them slowly, diagram them out, put numbers in them, make sample runs, etc. Speed will come later when you get familiar with the test (on average you have approximately 2 min. per test item – you'll need more than that at first.)

This is to be completed by the FIRST day of class. I will check it for completeness & effort. It will be your first HW (25% of overall grade) grade. We will go over the answers and then be prepared for a quiz (25% of overall grade) on the material soon after.
